EXPERIENCE

JSC "Kazakhstan Temir Zholy"

Astana, Kazakhstan

DevOps and ML Engineer (internship)

Jan 2026 – Jun 2026

- **Logistics optimization service:** as part of a team, built a system to reduce 8–12 hour locomotive downtime across a network of 1,000+ stations for a major joint-stock company (an IPO-process participant). Implemented an algorithm to auto-select optimal candidates among 90 locomotives.
- **Geodata & simulation:** integrated interactive maps built on OpenStreetMap (OSM) and OpenRailwayMap. Designed a sandbox environment for simulating and testing train schedules and emergency scenarios.
- The project never got final sign-off from management; potential savings are estimated at 40–50K KZT/hour (up to 500K KZT per locomotive).

Chalov Sole Proprietorship

Kazakhstan

Chief Technical Specialist

Jun 2026 – Sep 2026

- Set up and maintained the equipment fleet: all-in-one PCs, routers, IP cameras, laptops, printers.
- Built an internal service for staff: Kaspi auto-invoicing, fast printing of custom-designed labels and barcodes, Kaspi order notifications.
- Automated a YML catalog export for 2GIS Services (4,000+ items) by parsing Kaspi via session cookies, with unique purchase links and photos.
- Photo-based product search (a 14,000+ image dataset, fine-tuned on top of an existing OpenAI model) — used daily by 25+ employees.
- Automated collection and analysis of Umag warehouse stock (12,360 SKUs, 270,219 units) with separate reports for zero-cost items, negative stock, and low-stock alerts.
- Automated Kaspi invoice printing for thermal printers; for accounting — automatic generation of commercial proposals, e-invoices, and delivery notes.
- Analyzed 4,000+ active listings on Kaspi and Umag: seasonality, net revenue, excluding items with no cost basis.
- Extracted 10,000+ unique order numbers from Kaspi over the prior 3 months for analytics.
- Maintained sales reporting and managed the online warehouse database.

Wipon LLP

Kazakhstan

Data Scientist and Machine Learning Engineer (internship)

Sep 2026 – Dec 15, 2026

Tirek Systems and Solutions LLP

Kazakhstan

CTO, Co-founder

Dec 2024 – Aug 2026

- Designed a platform for accelerating academic writing and large-scale data analysis — **perricheno.com**. Astana Hub Startups participant. “Explore, write, analyze, cite, visualize — all in one place.”
- **LLM Agents:** designed an asynchronous, multi-layer multi-agent system with layered generation across 6 stages. Built an internal LaTeX compilation service (on TeX Live Full) written in Go — speeding up compilation 4x.
- **Data Analytics & Compilers:** integrated an isolated compilation service. The platform analyzes millions of rows of data; agents write R / Python / LaTeX / TikZ scripts for statistical analysis and generate precise, editable visualizations across 40+ chart types.
- Set up GitLab CI/CD workflows with automated testing.
- Infrastructure on Kubernetes (k3s) and Linux (Ubuntu).

EDUCATION

Astana IT University

Astana, Kazakhstan

Bachelor's Degree, 3rd (final) year

2024 – 2027 (expected)

PROJECTS & RESEARCH

E-commerce Logistics Research | *R, Logistic Regression*

Jan – Feb 2026

- Co-authored with Professor Dr. Kamal Imran Mohd Sharif (PhD in Technology, Operation and Logistics, Universiti Utara Malaysia), conducted a quantitative study on last-mile delivery analytics.
- Processed a dataset of 10,000,000+ transactions in R using binary logistic regression to evaluate the trade-off between delivery speed and reliability.

AI-First Financial Strategy Synthesis | *Python, XGBoost, Gemini API*

Feb 2026

- Co-author: Yedil Talasbekov (ML Engineer) · AI for Finance Decisions course (AIB 2402).
- **Generative AI experiment:** a 10-week iterative stock-forecasting cycle (GOOGL, ORCL, NET) using Gemini 3.0 Pro / 2.5 Pro / 2.0 Flash, grounded in 10-K filings with live web search; average MAE cut by 93%, reaching \$3.5 for Cloudflare and \$2.7 for Alphabet.
- **Ensemble forecasting model:** architecture built on XGBoost, Random Forest, and Logistic Regression — 36 pre-trained models covering every forecast horizon, R^2 consistently above 0.98 on short-term forecasts.
- **Feature engineering:** an 8-dimensional feature vector (RSI, MACD, Bollinger Bands, 5/20-day SMAs) to improve signal quality.
- **MLOps & deployment:** full CI/CD on Render.com and GitHub, an asynchronous live-data pipeline via yfinance, and automated chart generation with matplotlib.

TECHNICAL SKILLS

Programming Languages: Python, R

Databases & Analytics: PostgreSQL, Power BI, Tableau

ML & AI Systems: Multi-Agent Systems, LLM, XGBoost

DevOps & Cloud: Linux (Ubuntu/Debian), Google Cloud Platform, Kubernetes (k3s), Microservices, Docker, CI/CD (GitHub Actions, GitLab CI), Cloudflare Workers, Cloudflare Tunnel, Cloudflare DNS, Cloudflare Analytics

Tools & Geodata: Git / GitHub / GitLab (version control), OpenStreetMap / OSM (geodata), LaTeX (documentation), TikZ (visualization, diagrams), Figma (UI mockups)

Languages: Russian (C1), Kazakh (native), English (B2 — technical)
